<sup>1</sup>Qualifier column where '\*' denotes value outside the control limits or 'D' denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.  
 PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.  
 This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where \*R\* denotes value outside the control limits or \*D\* denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

<sup>1</sup>Qualifier column where '\*' denotes value outside the control limits or 'D' denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# CASE NARRATIVE

June 23, 2015

## CASE NARRATIVE

This data package (SDG ID: 15060107) consists of 7 water samples received on 06/04/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>         | <u>Collection Date</u> |
|----------------------|--------------------------|------------------------|
| AS11827              | FRS-FDBL-T150603120634   | 06/03/2015 11:58       |
| AS11828              | FRS-STWA-T150603120444   | 06/03/2015 12:04       |
| AS11829              | NRS-162.90-T150603081831 | 06/03/2015 06:00       |
| AS11830              | NRS-186.00-T150603081924 | 06/03/2015 06:00       |
| AS11831              | NRS-187.70-T150603082254 | 06/03/2015 06:00       |
| AS11832              | NRS-189.10-T150603082057 | 06/03/2015 06:00       |
| AS11833              | NRS-BDUP-T150603081852   | 06/03/2015             |

### Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 06/04/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

### Total PCBs by Green Bay Method (1L)

Analysis for Total PCBs was performed by PACE SOP NE294\_02. This analysis method is not approved by NYS-DOH ELAP, this method is performed for this project at the request of the customer under direction of the appropriate regulatory agency. Please contact Pace Analytical for documentation. Pace analytical makes no claim to NYS-DOH ELAP Certification for this method. Samples were extracted by USEPA SW-846 Method 3535A Solid Phase Extraction. The following technical and administrative items were noted for the analysis:

(1.) Peak 17, Peak 2, Peak 38, Peak 42, Peak 46, Peak 49, Peak 51, Peak 52, Peak 57, Peak 58, Peak 59, Peak 64, Peak 7, and Peak 8 were observed in the Method Blank sample. All associated positive sample concentration results have been flagged (B) to denote the observed contamination.

(2.) NOTE: mGBM DB-1 Peak 5 (IUPAC 4 and 10 PCB Congeners) Quantification by Secondary GC column analysis: IUPAC Congeners 4 and 10 co-elute on the primary ZB-1or DB-1 GC columns used for this analysis methodology as assigned GC Peak # 5. Individual quantitation of PCB Congeners IUPAC 4 and IUPAC 10 is provided by SOP NE293 as a secondary GC Column analysis using a CP-Sil5/C18 column. The concentration results for IUPAC 4 and IUPAC 10 are merged with the mGBM primary ZB/DB-1 GC column analysis and provided on the final PCB Congener Reports and Electronic Data Deliverables. IUPAC 4 and IUPAC 10 concentrations are designated on the PCB Congener Reports and EDDs as peaks 5-4 and 5-10. The original DB/ZB-1 Peak 5 response is not included in the summed total PCB concentrations to avoid double counting of these congeners.

(3.) Samples (LAB ID: AS11827) and quality control sample (LAB ID: AS11828B) were re-analyzed due to autosampler injection error. The results for the re-analysis are provided with RR1 suffix.

(4.) The associated laboratory control spike sample (LAB ID: AS11828L) was re-analyzed due to autosampler injection error. The sample was re-analyzed a second time due an internal standard failure. The results for the re-analysis are provided with a RR2 sample suffix ID.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

# SAMPLE CHAIN OF CUSTODY

385 West Grand Avenue, Montvale, NJ 07645 PH: 201-930-9899

Client: General Electric Company

### ENVIRONMENTAL SAMPLE CHAIN OF CUSTODY

Project: Hudson River Remedial Action Monitoring Program - Resuspension Monitoring

COC ID: COC150603153100PACE

Sample Custodian: SS

Lab: PACE

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made.  
 The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

 Lab Sample ID: AS11827RR1  
 LRF ID: 15060107-01RR1  
 Lab File ID: GC24-1178-6

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = <8.04 ng/L U

PCB Homolog Distribution

| Homologs | Weight % | Mole % |
|----------|----------|--------|
| Mono     | 14.00    | 17.82  |
| Di       | 51.87    | 55.84  |
| Tri      | 4.07     | 3.59   |
| Tetra    | 7.11     | 6.03   |
| Penta    | 20.75    | 15.27  |
| Hexa     | 2.20     | 1.46   |
| Hepta    | 0.00     | 0.00   |
| Octa     | 0.00     | 0.00   |
| Nona     | 0.00     | 0.00   |
| Deca     | 0.00     | 0.00   |

Nominal 'Aroclor' Distribution

| Aroclor  | Indicator Peak<br>(PK # / IUPAC #) | Amount<br>ng/L | Percent<br>Sediment | Percent<br>Biota |
|----------|------------------------------------|----------------|---------------------|------------------|

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: FRS-FDBL-T150603120634  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/11/2015 21:16:01  
 Lab Sample ID: AS11827RR1  
 LRF ID: 15060107-01RR1  
 Lab File ID: GC24-1178-6

Type for Mixed Peak Deconvolution = S

| DB-1 Peak Number | Retention Time | T-CL:O-CL | IUPAC # <sup>2</sup> | RRT    | Congeners <sup>3</sup> | Weight Percent | Mole Percent |

Concentration = <8.04 ng/L

Total Nanomoles = 0.023

Average Molecular Weight = 240.1

Number of Calibrated Peaks Found = 17

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |
| 48 ( <b>66</b> ,76,98,80,93, <b>95</b> , <b>102</b> ,88) | <i>80,88,93</i>             |
| 56 (78, <b>83</b> ,112,108)                              | <i>108</i>                  |
| 61 ( <b>77</b> , <b>110</b> ,148)                        | <b>77</b>                   |
| 72 ( <b>122</b> ,131,133,142)                            | <b>122</b>                  |
| 89 ( <b>128</b> ,162)                                    | <i>162</i>                  |
| 105( <b>200</b> ,169)                                    | <i>169</i>                  |

Total Concentration = 240 ng/L

8.04 32.2

Total Nanomoles = 1.075

Average Molecular Weight = 223.3

Number of Calibrated Peaks Found = 60

OCN Internal Standard Retention Time = 45.99 minutes

OCN Internal Standard Peak Area = 61428.4

FDBC Internal Standard Retention Time = 21.92 minutes

FDBC Internal Standard Peak Area = 79867.3

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: FRS-STWA-T150603120444  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/10/2015 20:27:14  
 Lab Sample ID: AS11828  
 LRF ID: 15060107-02  
 Lab File ID: GC24-1177-6

Type for Mixed Peak Deconvolution = S

This analysis method is not approved by NYS-DOH ELAP, this method is performed for this project at the request of the customer under direction of the appropriate regulatory agency. Please contact Pace Analytical for documentation. Pace analytical makes no claim to NYS-DOH ELAP Certification for this method.

Concentration = 240 ng/L

Total Nanomoles = 1.075

Average Molecular Weight = 223.3

Number of Calibrated Peaks Found = 60

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |
| 48 ( <b>66</b> ,76,98,80,93, <b>95</b> , <b>102</b> ,88) | <i>80,88,93</i>             |
| 56 (78, <b>83</b> ,112,108)                              | <i>108</i>                  |
| 61 ( <b>77</b> , <b>110</b> ,148)                        | <b>77</b>                   |
| 72 ( <b>122</b> ,131,133,142)                            | <b>122</b>                  |
| 89 ( <b>128</b> ,162)                                    | <i>162</i>                  |
| 105( <b>200</b> ,169)                                    | <i>169</i>                  |

Project Name: GC24\_Jan\_2015  
Sample Set Name: GC24\_061215c  
Date Printed: 6/17/2015

**Operating Conditions Gas Chromatography**

User Name: Amie Hamilton Injection Method: Splitless  
Sample Size: 0.5 uL Column Type: Capillary

**Temperature Information**

Column Temperature: Program  
Injector Temperature: 300 °C  
Detector Temperature: 300 °C

**Column Temperature Information**

Initial Temperature: 50 °C Hold: 2.5 min  
Temperature Program: 15 °C/min  
Intermediate Temperature: 150 °C  
Temperature Program: 4.3 °C/min  
Final Temperature: 220 °C Hold: 35.1 min

**Column Information**

Column ID: Phenomenex ZB-1 30m, 0.25mm ID, 0.25 µm  
Material: Fused Silica  
Length: 30 meter  
Internal Diameter: 0.25 mm  
Carrier Gas: Helium Make-up Gas: Nitrogen  
Flow Pressure: 23.5 Make-up Flow: 70 mL/min  
Split Ratio: None

**Detector Information**

Detector Name: Detector 1 GC24 Detector Type: ECD Detector Range: 4

Sample Name: ICAL0120B  
 Sample ID: ICAL 12.5 ng/mL  
 Date Acquired: 1/20/2015 5:05:30 PM EST

Sample Amount: 1  
 Dilution: 1  
 Processing Method: CSGB LL1X 012015  
 LIMS File ID: GC24-1126-7 [m]

Sample Name: ICAL0120F  
Sample ID: ICAL 1254 ng/mL  
Date Acquired: 1/20/2015 9:28:26 PM EST

Sample Amount: 1  
Dilution: 1  
Processing Method: CSGB LL1X 012015  
LIMS File ID: GC24-1126-11 [m]

# STANDARDS RAW DATA (GC24)

Sample Name: CCCS0610A  
 Sample ID: CCC Std 122 ng/mL  
 Date Acquired: 6/10/2015 5:09:59 PM EDT

Sample Amount: 1  
 Dilution: 1  
 Processing Method: CSGB\_LL1X\_012015  
 LIMS File ID: GC24-1177-3 [m]

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/10/2015 17:09:59  
 Lab Sample ID: CCCS0610A  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1177-3

Type for Mixed Peak Deconvolution = S

Total PCBs in sample = 136 ng/mL

PCB Homolog Distribution

| Homologs | Weight % | Mole % |
|----------|----------|--------|
| Mono     | 11.28    | 16.80  |
| Di       | 11.99    | 15.03  |
| Tri      | 17.79    | 19.40  |
| Tetra    | 21.82    | 21.07  |
| Penta    | 8.38     | 7.17   |
| Hexa     | 7.38     | 5.80   |
| Hepta    | 13.29    | 9.47   |
| Octa     | 7.40     | 4.84   |
| Nona     | 0.67     | 0.40   |
| Deca     | 0.01     | 0.00   |

Nominal 'Aroclor' Distribution

| Aroclor  | Indicator Peak<br>(PK # / IUPAC #) | Amount<br>(ng/mL) | Percent  |       |
|----------|------------------------------------|-------------------|----------|-------|
|          |                                    |                   | Sediment | Biota |
| A1221    | 2/001                              | 8.5048            | 37.8     | 31.1  |
| A1242    | 23+24/31+28                        | 6.7841            | 30.1     | 24.8  |
| A1254SED | 61/100                             | 1.7357            | 7.71     |       |
| A1254BIO | 69+75+82/149+153+138               | 6.5708            |          | 24.0  |
| A1260    | 102/180                            | 4.2945            | 19.1     | 15.7  |
| A1268    | 115/194                            | 1.1986            | 5.32     | 4.38  |

Ortho Cl / biphenyl Residue = 1.56  
 Meta + Para Cl / biphenyl Residue = 2.12  
 Total Cl / biphenyl Residue = 3.69

This analysis method is not approved by NYS-DOH ELAP, this method is performed for this project at the request of the customer under direction of the appropriate regulatory agency. Please contact Pace Analytical for documentation. Pace Analytical makes no claim to NYS-DOH ELAP Certification for this method.

Total Concentration = 136 ng/mL

Total Nanomoles = 0.483

Average Molecular Weight = 281.2

Number of Calibrated Peaks Found = 102

OCN Internal Standard Retention Time = 45.98 minutes

OCN Internal Standard Peak Area = 53813.8

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/10/2015 17:09:59  
 Lab Sample ID: CCCS0610A  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1177-3

Type for Mixed Peak Deconvolution = S

This analysis method is not approved by NYS-DOH ELAP, this method is performed for this project at the request of the customer under direction of the appropriate regulatory agency. Please contact Pace Analytical for documentation. Pace analytical makes no claim to NYS-DOH ELAP Certification for this method.

Concentration = 136 ng/mL

Total Nanomoles = 0.483

Average Molecular Weight = 281.2

Number of Calibrated Peaks Found = 102

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |
| 48 ( <b>66</b> ,76,98,80,93, <b>95</b> , <b>102</b> ,88) | <i>80,88,93</i>             |
| 56 (78, <b>83</b> ,112,108)                              | <i>108</i>                  |

Ortho Cl / biphenyl Residue = 1.59

Meta + Para Cl / biphenyl Residue = 2.14

Total Cl / biphenyl Residue = 3.73

This analysis method is not approved by NYS-DOH ELAP, this method is performed for this project at the request of the customer under direction of the appropriate regulatory agency. Please contact Pace Analytical for documentation. Pace Analytical makes no claim to NYS-DOH ELAP Certification for this method.

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/10/2015 22:17:24  
 Lab Sample ID: CCCS0610B  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1177-7

Type for Mixed Peak Deconvolution = S

Total Concentration = 126 ng/mL

Total Nanomoles = 0.447

Average Molecular Weight = 282.6

Number of Calibrated Peaks Found = 102

OCN Internal Standard Retention Time = 46.00 minutes

OCN Internal Standard Peak Area = 57399.0

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/10/2015 22:17:24  
 Lab Sample ID: CCCS0610B  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1177-7

Type for Mixed Peak Deconvolution = S

Concentration = 126 ng/mL

Total Nanomoles = 0.447

Average Molecular Weight = 282.6

Number of Calibrated Peaks Found = 102

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

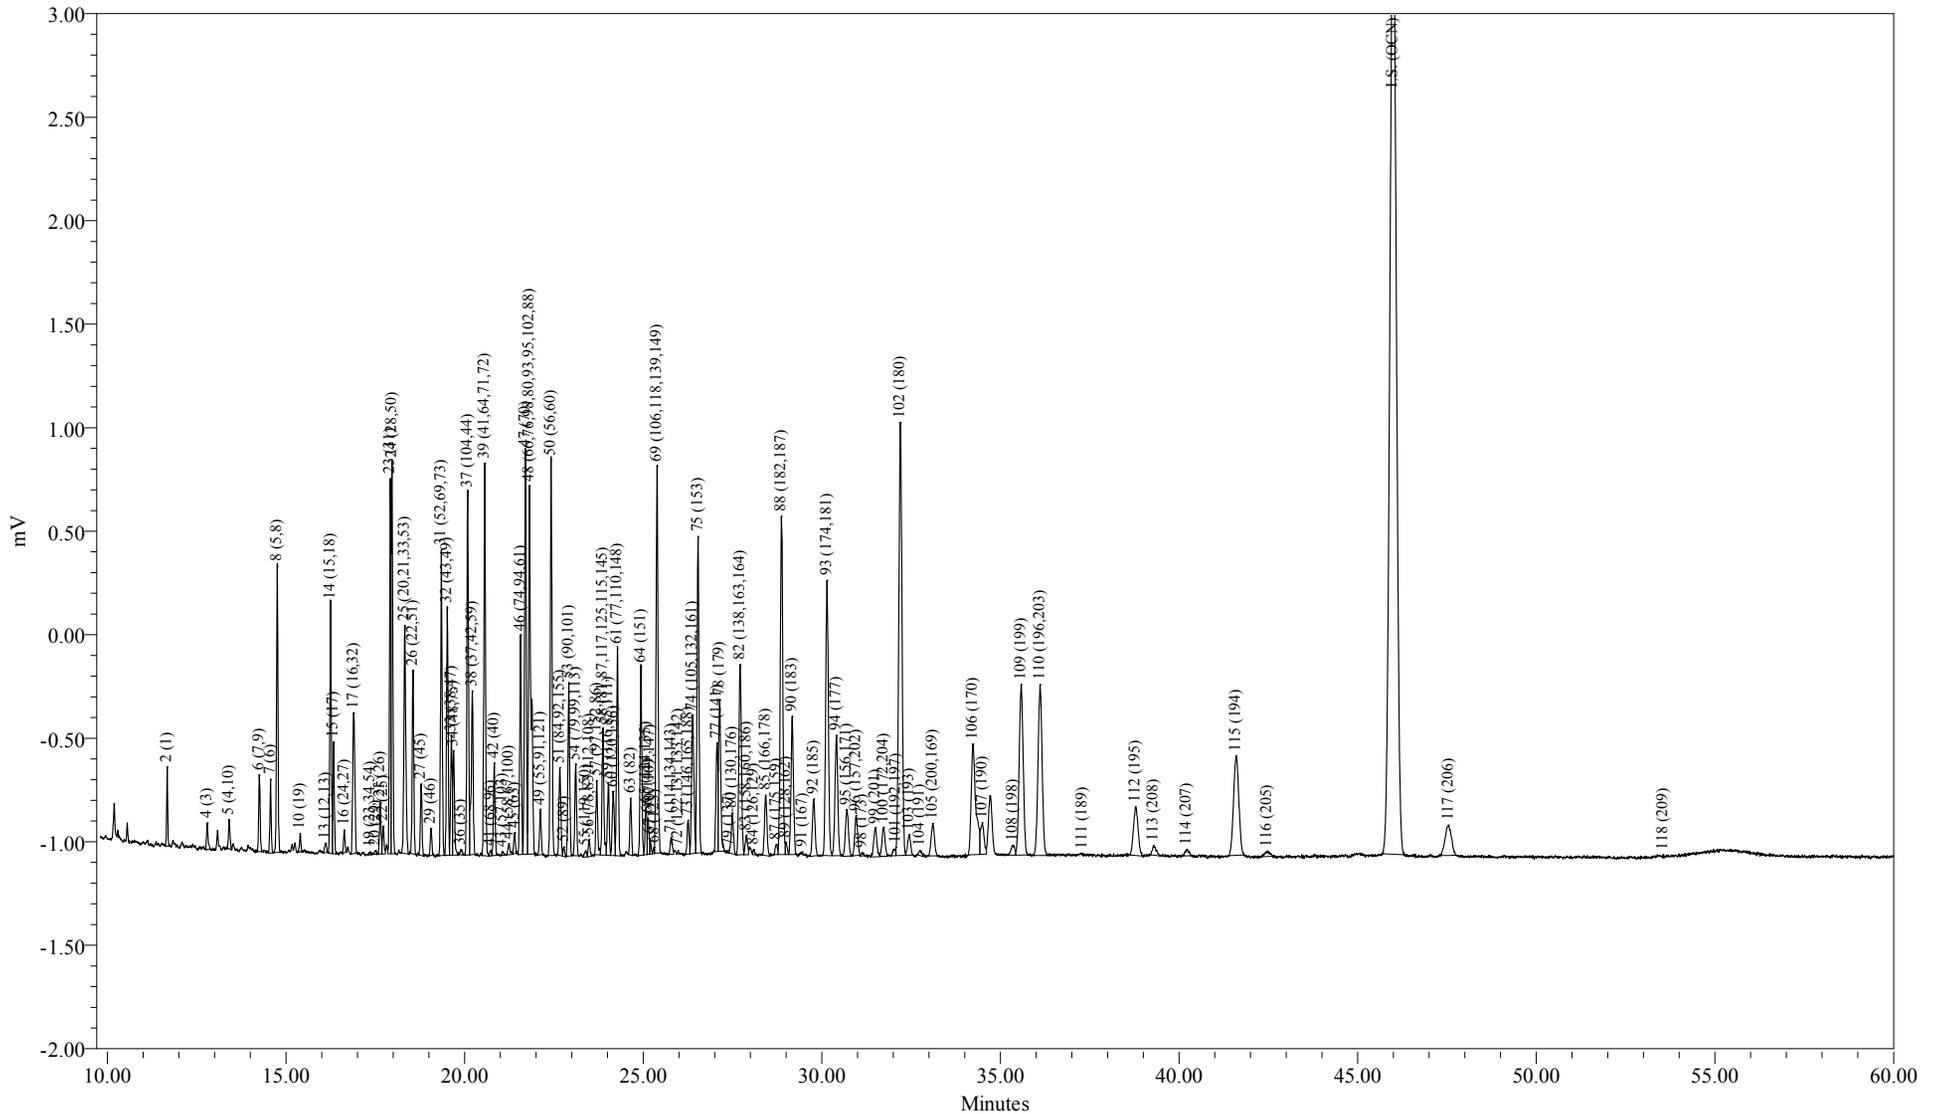

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |
| 48 ( <b>66</b> ,76,98,80,93, <b>95</b> , <b>102</b> ,88) | <i>80,88,93</i>             |
| 56 (78, <b>83</b> ,112,108)                              | <i>108</i>                  |
| 61 ( <b>77</b> , <b>110</b> ,148)                        | <i>77</i>                   |
| 72 ( <b>122</b> ,131,133,142)                            | <i>122</i>                  |
| 89 ( <b>128</b> ,162)                                    | <i>162</i>                  |

Total Concentration = 126 ng/mL

Total Nanomoles = 0.449

Average Molecular Weight = 281.2

Number of Calibrated Peaks Found = 102

OCN Internal Standard Retention Time = 45.99 minutes

OCN Internal Standard Peak Area = 59721.5

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/11/2015 00:28:48  
 Lab Sample ID: CCCS0610C  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1177-9

Please contact Pace Analytical for documentation. Pace analytical makes no claim to NYS-DOH ELAP Certification for this method.

Concentration = 126 ng/mL

Total Nanomoles = 0.449

Average Molecular Weight = 281.2

Number of Calibrated Peaks Found = 102

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

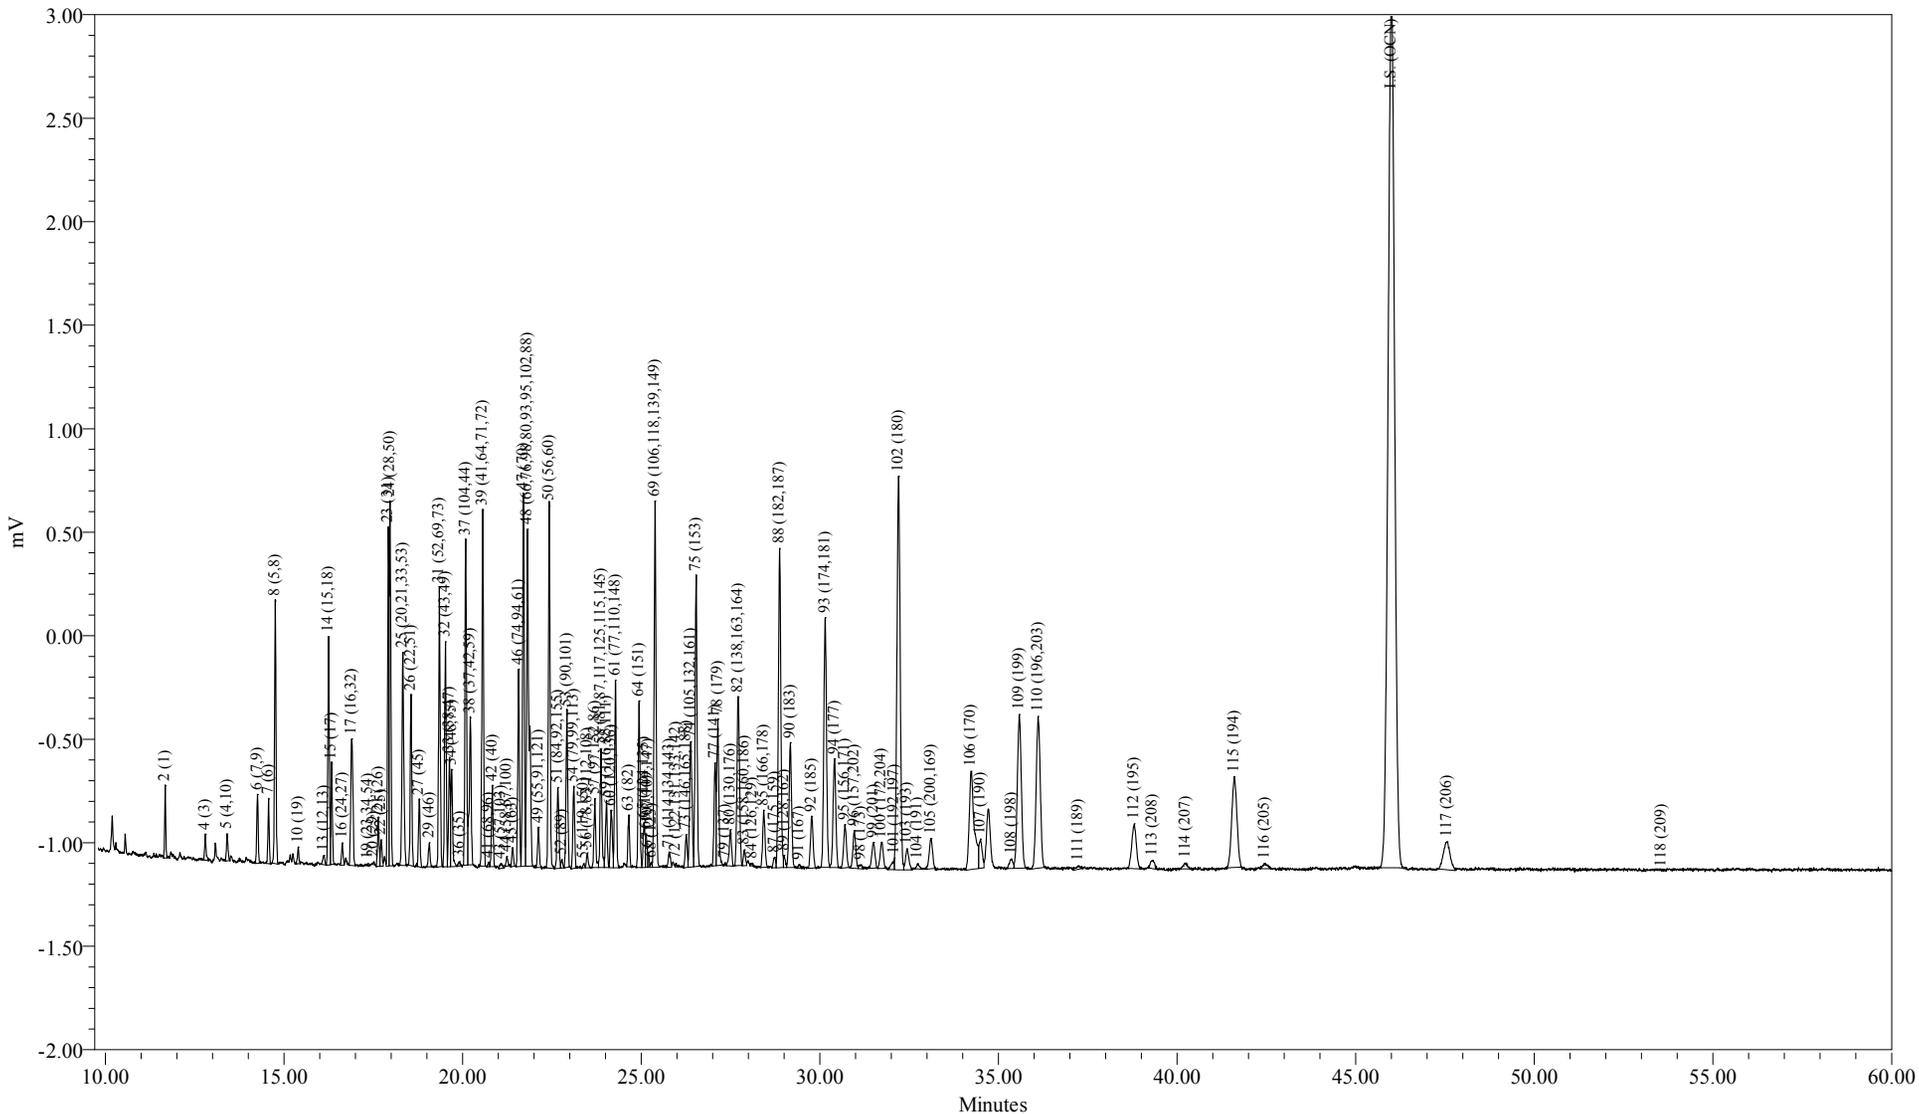

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |

Total Concentration = 129 ng/mL

Total Nanomoles = 0.459

Average Molecular Weight = 281.0

Number of Calibrated Peaks Found = 102

OCN Internal Standard Retention Time = 46.00 minutes

OCN Internal Standard Peak Area = 53559.7

### PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/11/2015 20:01:03  
 Lab Sample ID: CCCS0611B  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1178-5

Type for Mixed Peak Deconvolution = S

Please contact Pace Analytical for documentation. Pace analytical makes no claim to NYS-DOH ELAP Certification for this method.

Concentration = 129 ng/mL

Total Nanomoles = 0.459

Average Molecular Weight = 281.0

Number of Calibrated Peaks Found = 102

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |
| 48 ( <b>66</b> ,76,98,80,93, <b>95</b> , <b>102</b> ,88) | <i>80,88,93</i>             |
| 56 (78, <b>83</b> ,112,108)                              | <i>108</i>                  |
| 61 ( <b>77</b> , <b>110</b> ,148)                        | <i>77</i>                   |
| 72 ( <b>122</b> ,131,133,142)                            | <i>122</i>                  |
| 89 ( <b>128</b> ,162)                                    | <i>162</i>                  |
| 105 ( <b>200</b> ,169)                                   | <i>169</i>                  |

Total Concentration = 127 ng/mL

Total Nanomoles = 0.450

Average Molecular Weight = 281.1

Number of Calibrated Peaks Found = 102

OCN Internal Standard Retention Time = 45.99 minutes

OCN Internal Standard Peak Area = 58503.4

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/11/2015 22:21:36  
 Lab Sample ID: CCCS0611C  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1178-7

Type for Mixed Peak Deconvolution = S

This analysis method is not approved by NYS-DOH ELAP, this method is performed for this project at the request of the customer under direction of the appropriate regulatory agency. Please contact Pace Analytical for documentation. Pace analytical makes no claim to NYS-DOH ELAP Certification for this method.

Concentration = 127 ng/mL

Total Nanomoles = 0.450

Average Molecular Weight = 281.1

Number of Calibrated Peaks Found = 102

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

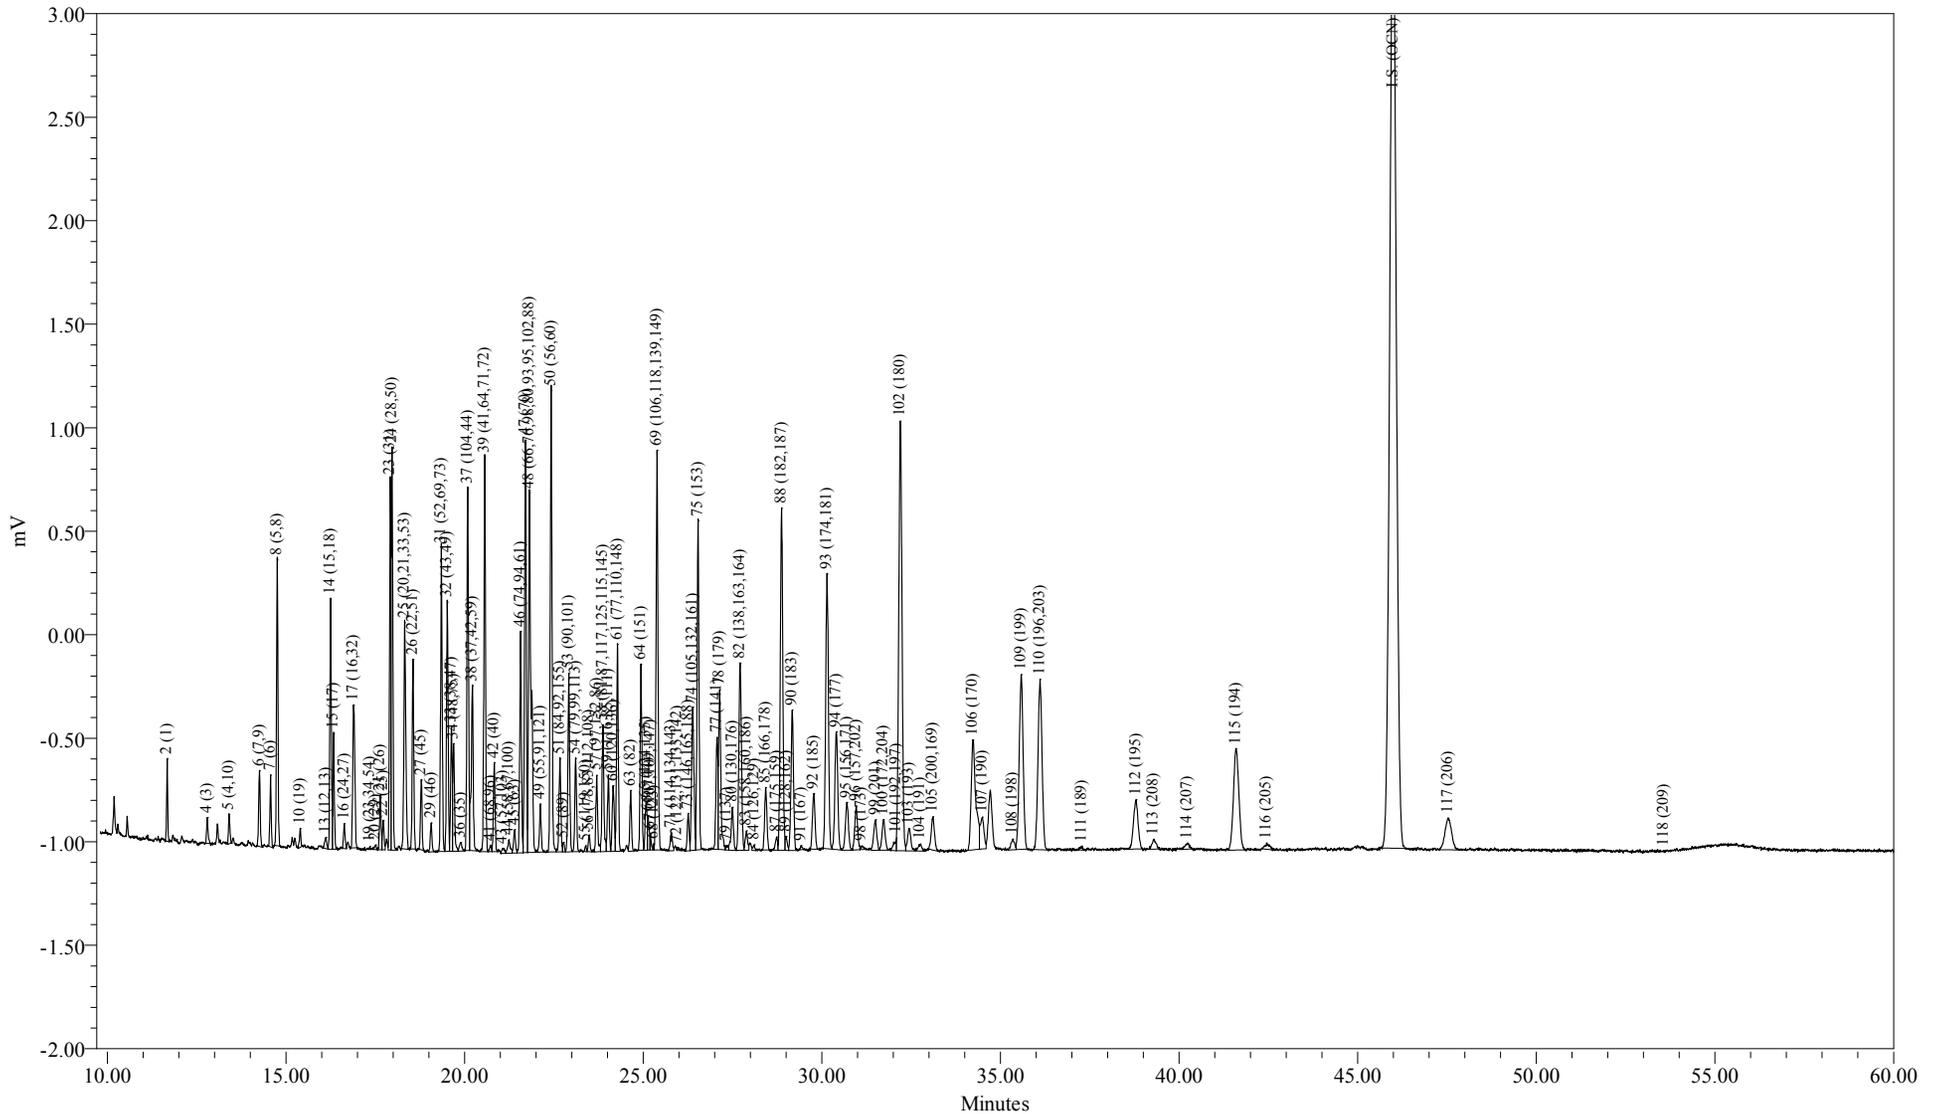

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |

Ortho Cl / biphenyl Residue = 1.57

Meta + Para Cl / biphenyl Residue = 2.14

Total Cl / biphenyl Residue = 3.71

This analysis method is not approved by NYS-DOH ELAP, this method is performed for this project at the request of the customer under direction of the appropriate regulatory agency. Please contact Pace Analytical for documentation. Pace Analytical makes no claim to NYS-DOH ELAP Certification for this method.

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/12/2015 19:04:27  
 Lab Sample ID: CCCS0612A  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1179-3

Type for Mixed Peak Deconvolution = S

Total Concentration = 130 ng/mL

Total Nanomoles = 0.462

Average Molecular Weight = 282.1

Number of Calibrated Peaks Found = 102

OCN Internal Standard Retention Time = 46.00 minutes

OCN Internal Standard Peak Area = 59007.8

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/12/2015 19:04:27  
 Lab Sample ID: CCCS0612A  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1179-3

Type for Mixed Peak Deconvolution = S

Concentration = 130 ng/mL

Total Nanomoles = 0.462

Average Molecular Weight = 282.1

Number of Calibrated Peaks Found = 102

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

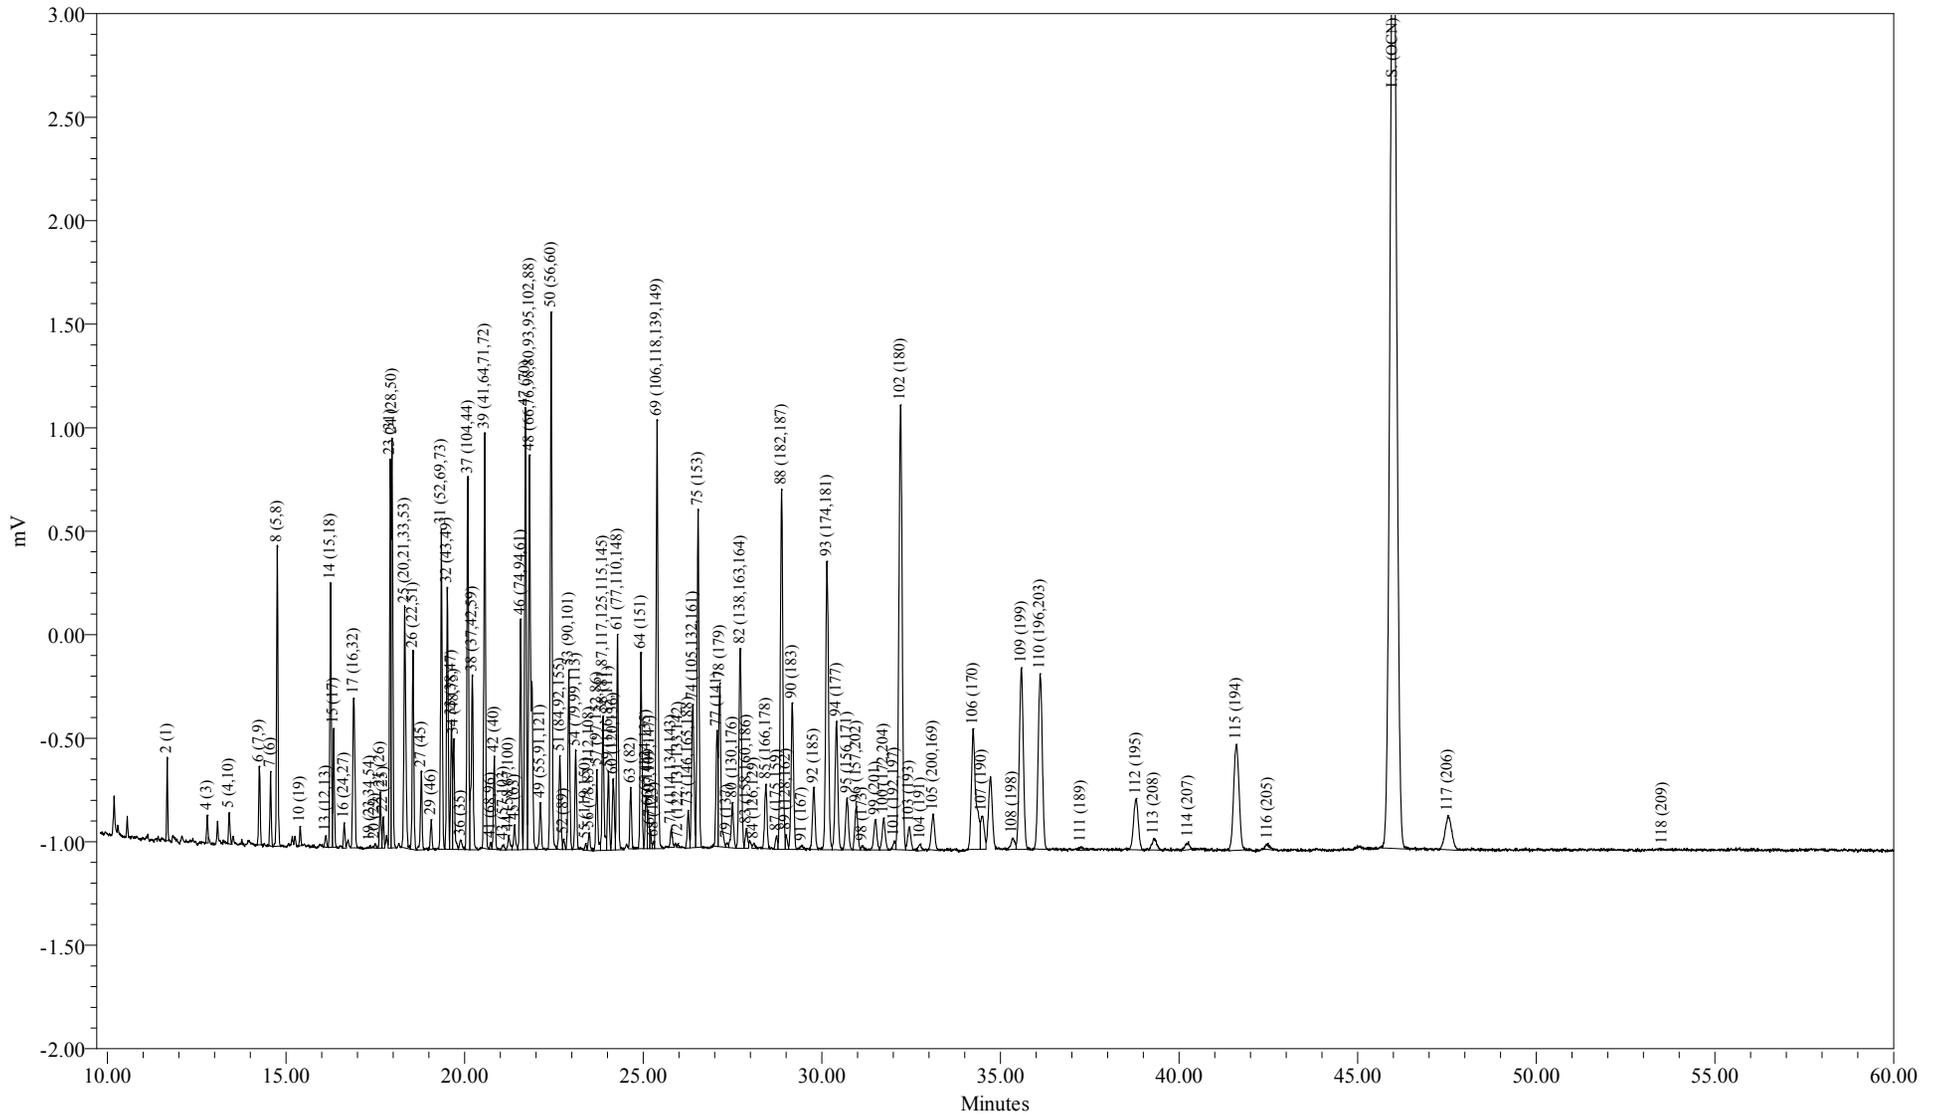

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |
| 48 ( <b>66</b> ,76,98,80,93, <b>95</b> , <b>102</b> ,88) | <i>80,88,93</i>             |
| 56 (78, <b>83</b> ,112,108)                              | <i>108</i>                  |
| 61 ( <b>77</b> , <b>110</b> ,148)                        | <i>77</i>                   |
| 72 ( <b>122</b> ,131,133,142)                            | <i>122</i>                  |

Total Concentration = 126 ng/mL

Total Nanomoles = 0.444

Average Molecular Weight = 283.7

Number of Calibrated Peaks Found = 102

OCN Internal Standard Retention Time = 46.00 minutes

OCN Internal Standard Peak Area = 63741.0

### PCB Congener Amount Report

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: CCC Std 122 ng/mL  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/13/2015 00:03:23  
 Lab Sample ID: CCCS0612B  
 LRF ID: CCC Std 122 ng/mL  
 Lab File ID: GC24-1179-6

Type for Mixed Peak Deconvolution = S

This analysis method is not approved by NYS-DOH ELAP, this method is performed for this project at the request of the customer under direction of the appropriate regulatory agency. Please contact Pace Analytical for documentation. Pace analytical makes no claim to NYS-DOH ELAP Certification for this method.

Concentration = 126 ng/mL

Total Nanomoles = 0.444

Average Molecular Weight = 283.7

Number of Calibrated Peaks Found = 102

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: METHOD BLANK  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/10/2015 23:23:06  
 Lab Sample ID: AS11828BRR1  
 LRF ID: CEBLK-50RR1  
 Lab File ID: GC24-1177-8

Type for Mixed Peak Deconvolution = S

Concentration = <8.04 ng/L

Total Nanomoles = 0.032

Average Molecular Weight = 243.5

Number of Calibrated Peaks Found = 18

<sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

<sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.

<sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.

<sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of ± 0.07 minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |
| 48 ( <b>66</b> ,76,98,80,93, <b>95</b> , <b>102</b> ,88) | <i>80,88,93</i>             |
| 56 (78, <b>83</b> ,112,108)                              | <i>108</i>                  |
| 61 ( <b>77</b> , <b>110</b> ,148)                        | <b>77</b>                   |
| 72 ( <b>122</b> ,131,133,142)                            | <b>122</b>                  |
| 89 ( <b>128</b> ,162)                                    | <i>162</i>                  |
| 105( <b>200</b> ,169)                                    | <i>169</i>                  |

Ortho Cl / biphenyl Residue = 1.47

Meta + Para Cl / biphenyl Residue = 1.72

Total Cl / biphenyl Residue = 3.19

This analysis method is not approved by NYS-DOH ELAP, this method is performed for this project at the request of the customer under direction of the appropriate regulatory agency. Please contact Pace Analytical for documentation. Pace Analytical makes no claim to NYS-DOH ELAP Certification for this method.

**PCB Congener Amount Report**

Customer: GENERAL ELECTRIC COMPANY  
 Sample Description: LAB CONTROL SPIKE  
 Comment: HUDSON RIVER RAMP;COC150603153100PACE  
 Date Acquired: 06/12/2015 22:57:40  
 Lab Sample ID: AS11828LRR2  
 LRF ID: LCS-50RR2  
 Lab File ID: GC24-1179-5

18

Concentration = 266 ng/L

Total Nanomoles = 1.007

Average Molecular Weight = 263.9

Number of Calibrated Peaks Found = 60

- <sup>1</sup> - Note that five DB-1 peaks (PK18, PK40, PK81, PK86, PK97) have been removed from the DB-1 peak numbering scheme. The following low level congeners that were designated as separately eluting peaks have been determined to co-elute with another congener. The DB-1 peak numbers are no longer required for these congeners, but the original DB-1 numbering system has remained intact for all other peaks.

PK 18 (23) now elutes in PK 19 (23,34,54)  
 PK 40 (68) now elutes in PK 41 (68,96)  
 PK 86 (166) now elutes in PK 85 (166,178)  
 PK 97 (157) now elutes in PK 96 (157,202)

- <sup>2</sup> - IUPAC congener numbers listed in **boldface** font were found to be present in at least one of the Aroclors at or above 0.05 weight percent. These congeners should be considered the primary congeners existing in a peak composed of co-eluting congeners. IUPAC congener numbers listed in *italic* font were absent or present below 0.05 weight percent.
- <sup>3</sup> - PCB congener identification is denoted by position of the chlorine atoms on each ring of the biphenyl molecule. Designation used in this report has unprimed chlorines separated from primed chlorines by a hyphen that represents separation of the biphenyl rings.
- <sup>4</sup> - DB-1 peaks may include one or more coeluting PCB congeners. In the case of some peaks, the congeners assigned to the peak consist of coeluting congeners and a congener that is resolved or is just slightly out of the normal retention time window of  $\pm 0.07$  minutes. If detection of one of the resolved congeners occurs, a comment will be included in the report narrative indicating the assigned DB-1 peak includes the presence of the resolved congener. The DB-1 peaks consisting of coeluting congeners and a congener that is resolved are as follows:

| DB-1 Peak  | Resolved Congener (IUPAC #) |
|--|-----------------------------|
| 37 ( <b>44</b> ,104)                                     | <i>104</i>                  |
| 48 ( <b>66</b> ,76,98,80,93, <b>95</b> , <b>102</b> ,88) | <i>80,88,93</i>             |
| 56 (78, <b>83</b> ,112,108)                              | <i>108</i>                  |
| 61 ( <b>77</b> , <b>110</b> ,148)                        | <b>77</b>                   |
| 72 ( <b>122</b> ,131,133,142)                            | <b>122</b>                  |
| 89 ( <b>128</b> ,162)                                    | <i>162</i>                  |
| 105( <b>200</b> ,169)                                    | <i>169</i>                  |

Notes

<sup>1</sup> The MDLs and RLs will be adjusted for sample specific factors such as % solids, weights/volumes and dilutions that vary from the standard procedure. Sample-specific MDLs and RLs are highly matrix dependent. The MDLs and RLs reported for the Air Matrix are based on the anticipated volume of air to be collected in the field (288 m<sup>3</sup> for TO-4A and 7.2 m<sup>3</sup> for TO-10A). Data will be evaluated against sample-specific MDLs and RLs. Non-detects, or values detected at a level below the sample specific MDL, will be reported as the sample specific MDL and U flagged (with the exception of analytes where MDL is NA). Values detected above the sample-specific MDL and below the sample-specific RL will be reported and flagged as estimated ("J").

NA - Not Applicable. Method detection limit (MDL) reporting will not be used for this analyte. The analyte will be reported to the Reporting Limit (RL).

\*\* - Peak 114 corresponds to IUPAC 207, which is the surrogate. The surrogate was not included in the Green Bay MDL study performed for fish or sediment.

# CASE NARRATIVE

June 08, 2015

CASE NARRATIVE

This data package (SDG ID: 15060109) consists of 2 water samples received on 6/4/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>       | <u>Collection Date</u> |
|----------------------|------------------------|------------------------|
| AS11837              | FRS-LOC5-T150604085101 | 6/4/2015 06:00         |
| AS11838              | FRS-WAFA-T150604085226 | 6/4/2015 06:00         |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 6/4/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration results for Aroclor 1254 were flagged (AF) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (3.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (4.) Quality control samples (LAB ID: AS11838B and AS11838L) were re-analyzed due to chromatographic interference from a non-target contaminant pattern originated from the sample injection. Results for the re-analysis are provided with RR1 sample ID suffix.
- (5.) The chromatograms for samples (LAB ID: AS11837 and AS11838) exhibited a non-PCB peak which elute within the retention time window for quantitation peak 12. This peak caused the calculated concentration to exceed the MDL for A1248. Actual Aroclor 1248 patterns were not observed in the sample and the sample was reported as non-detect. Please see associated chromatograms for details.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made. The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

| 11096-82-5 | Aroclor 1260  | 0.0250                | U    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{10500.842437 - -16.185578}{251.658479} = 41.7909 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{41.7909 \text{ ng/mL} * 5.0 \text{ mL} * 1}{1040 \text{ mL}} = 0.201 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

% RSD Limit <= 20%

TCMX=TETRACHLOROMETAXYLENE

DCBP=DECACHLOROBIPHENYL

<sup>1</sup> Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

| 11096-82-5 | Aroclor 1260  | 0.0250                | U  |

Laboratory Qualifiers:

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where \* denotes value outside the control limits or 'D' denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# CASE NARRATIVE

June 09, 2015

CASE NARRATIVE

This data package (SDG ID: 15060144) consists of 4 water samples received on 6/5/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>         | <u>Collection Date</u> |
|----------------------|--------------------------|------------------------|
| AS11962              | NRS-162.90-T150605093238 | 6/4/2015 06:00         |
| AS11963              | NRS-186.00-T150604085439 | 6/4/2015 06:00         |
| AS11964              | NRS-187.70-T150604085544 | 6/4/2015 06:00         |
| AS11965              | NRS-BDUP-T150604085511   | 6/4/2015               |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 6/5/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration results for Aroclor 1254 were flagged (AF) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (3.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (4.) Sample (LAB ID: AS11962) was re-analyzed due to chromatographic interference from a non-target contaminant pattern originated from the sample injection. Results for the re-analysis are provided with RR1 sample ID suffix.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made.  
 The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{9638.716795 - -16.185578}{251.658479} = 38.3651 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{38.3651 \text{ ng/mL} * 5.0 \text{ mL} * 1}{1070 \text{ mL}} = 0.179 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

% RSD Limit <= 20%

TCMX=TETRACHLOROMETAXYLENE

DCBP=DECACHLOROBIPHENYL

<sup>1</sup> Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

| 11096-82-5 | Aroclor 1260  | 0.0250                | U |

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where \* denotes value outside the control limits or 'D' denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

<sup>1</sup>Qualifier column where \* denotes value outside the control limits or 'D' denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

AF-Aroclor 1254 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# CASE NARRATIVE

June 09, 2015

CASE NARRATIVE

This data package (SDG ID: 15060145) consists of 2 water samples received on 06/05/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>       | <u>Collection Date</u> |
|----------------------|------------------------|------------------------|
| AS11966              | FRS-LOC5-T150605081249 | 06/05/2015 06:00       |
| AS11967              | FRS-WAFA-T150605082114 | 06/05/2015 06:00       |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 06/05/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (3.) Sample (LAB ID: AS11966) was re-analyzed due to chromatographic interference from a non-target contaminant pattern originated from the sample injection. Results for the re-analysis are provided with RR1 sample ID suffix.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) The relative percent difference between the sample and the duplicate sample was outside quality acceptance limits for sample (LAB ID: AS11966D). Please see associated duplicate form for details.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made. The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

| 11096-82-5 | Aroclor 1260  | 0.0296                | U  |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{8655.769700 - -16.185578}{251.658479} = 34.4592 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{34.4592 \text{ ng/mL} * 5.0 \text{ mL} * 1}{1070 \text{ mL}} = 0.161 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |

# Column used to flag surrogate retention times outside expected range.

FORM VIII-CLP-PCB(PACE)

Print Date: 6/9/2015  
Lims Version : 5.0.8.9

**8-D-1  
PCB ANALYTICAL SEQUENCE**

Laboratory Name: Pace Analytical Services, Inc.

SDG No: 15060145

ELAP ID No: 11078

Instrument ID: GC28F

Init. Calib. Date(s): 03/12/15,03/13/15

GC Column (1): Phenomenex, Zebron ZB-1MS, 20 m, 0.18 mm ID, 0.18 µm

THE ANALYTICAL SEQUENCE OF SAMPLES, QC, AND STANDARDS IS GIVEN BELOW:

| SURROGATE RETENTION TIME (RT) FROM INITIAL OR CONTINUING CALIBRATION |                           |                  |                |                         |                               |                               |

% RSD Limit <= 20%

TCMX=TETRACHLOROMETAXYLENE

DCBP=DECACHLOROBIPHENYL

<sup>1</sup> Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

| 11096-82-5 | Aroclor 1260  | 0.0250                | U |

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where \*R\* denotes value outside the control limits or \*D\* denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# CASE NARRATIVE

June 11, 2015

CASE NARRATIVE

This data package (SDG ID: 15060190) consists of 3 water samples received on 6/7/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>         | <u>Collection Date</u> |
|----------------------|--------------------------|------------------------|
| AS12338              | NRS-162.90-T150605082250 | 6/5/2015 06:00         |
| AS12339              | NRS-186.00-T150605082344 | 6/5/2015 06:00         |
| AS12340              | NRS-187.70-T150605082422 | 6/5/2015 06:00         |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 6/7/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (3.) Method blank sample (LAB ID: AS12338B) was re-analyzed due to chromatographic interference from a non-target contaminant pattern originated from the sample injection. Results for the re-analysis are provided with RR1 sample ID suffix.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

# SAMPLE CHAIN OF CUSTODY

- <sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.
- <sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.
- <sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.
- <sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made. The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.
- <sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.
- <sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

| 11096-82-5 | Aroclor 1260  | 0.0250                | U    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.  
 PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.  
 J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.  
 U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{6052.274739 - -16.185578}{251.658479} = 24.1139 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{24.1139 \text{ ng/mL} * 5.0 \text{ mL} * 1}{1070 \text{ mL}} = 0.113 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |
|---|--------------|-------------------------|-----------------------------|------------|------------|
| 1 | Aroclor 1221 | 0.999724                | Y = 2.52e+002 X - 1.62e+001 | -16.185578 | 251.658479 |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Print Date: 6/11/2015  
Lims Version : 5.0.8.9

# INITIAL CALIBRATION DATA (GC28F)

6F-1  
PCB INITIAL CALIBRATION OF MULTICOMPONENT ANALYTES

Laboratory Name: Pace Analytical Services, Inc.

SDG NO: 15060190

ELAP ID No: 11078

Date(s) Analyzed: 03/12/15,03/13/15

Instrument ID: GC28F

GC Column: Phenomenex, Zebron ZB-1MS, 20 m, 0.18 mm ID, 0.18 µm

TCMX=TETRACHLOROMETAXYLENE

DCBP=DECACHLOROBIPHENYL

<sup>1</sup> Response factor calculated using total area of 5 peaks used to quantitate each Aroclor. Mean response factor not used in Aroclor quantitation, calibration curve by linear regression used for quantitation. Concentrations are nominal values, please see Calibration Curve Report Point Table for actual values.

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where \* denotes value outside the control limits or 'D' denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# CASE NARRATIVE

June 09, 2015

CASE NARRATIVE

This data package (SDG ID: 15060189) consists of 4 water samples received on 6/7/2015. The samples are from Project Name: HUDSON RIVER RAMP.

This sample delivery group consists of the following samples:

| <u>Lab Sample ID</u> | <u>Client ID</u>       | <u>Collection Date</u> |
|----------------------|------------------------|------------------------|
| AS12334              | FRS-LOC5-T150607125205 | 6/7/2015 06:00         |
| AS12335              | FRS-LOC5-T150607125229 | 6/6/2015 06:00         |
| AS12336              | FRS-WAFA-T150607125316 | 6/7/2015 06:00         |
| AS12337              | FRS-WAFA-T150607125337 | 6/6/2015 06:00         |

Sample Delivery and Receipt Conditions

- (1.) Lab provided sample pickup service on 6/7/2015.
- (2.) All samples were received at the laboratory intact and within holding times.
- (3.) All samples were received at the laboratory properly preserved, if applicable.

PCB Aroclor Analysis

Analysis for PCB Aroclors was performed by NE273\_04 (Quick TAT Aroclor Method). The following technical and administrative items were noted for the analysis:

- (1.) The concentration results for Aroclor 1242 were flagged (AD) to denote that an altered Aroclor pattern was observed. Please see Form 1 for details.
- (2.) The concentration result for Aroclor 1221 was flagged (PB) to denote that Aroclor 1221 is being used to quantify an altered Aroclor pattern. Actual Aroclor 1221 was not presumed to be present in the sample(s). Please see associated Form 1 for details.
- (3.) Sample (LAB ID: AS12337) was re-analyzed due to chromatographic interference from a non-target contaminant pattern originated from the sample injection. Results for the re-analysis are provided with RR1 sample ID suffix.

Total Suspended Solids by SM 2540D

Analysis for Total Suspended Solids (TSS) was performed by SM 2540D (PACE SOP NE117\_06). The following technical and administrative items were noted for the analysis:

- (1.) All quality assurance parameters were met for this analysis, unless otherwise noted.

Respectfully submitted,

William A. Kotas  
Assistant General Manager

# QUALIFIERS

## **Definitions**

B - Denotes analyte observed in associated method blank or extraction blank. Analyte concentration should be considered as estimated.

D - Surrogate was diluted. The analysis of the sample required a dilution such that the surrogate concentration was diluted outside the laboratory acceptance criteria.

E - Denotes analyte concentration exceeded calibration range of instrument. Sample could not be re-analyzed at secondary dilution due to insufficient sample amount, quick turn-around request, sample matrix interference or hold time excursion. Concentration result should be considered as estimated.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the Practical Quantitation Limit (PQL).

MDL – Method Detection Limit. Denotes lowest analyte concentration observable for the sample based on statistical study.

P - Indicates relative percent difference (RPD) between primary and secondary gas chromatograph (GC) column analysis exceeds 40 % or indicates percent difference (PD) between primary and secondary gas chromatograph (GC) column analysis exceeds 25 %.

PQL – Practical Quantitation Limit. Denotes lowest analyte concentration reportable for the sample.

U - Denotes analyte not detected at concentration greater than the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

Z - Chromatographic interference due to polychlorinated biphenyl (PCB) co-elution.

\* - Value not within control limits.

<sup>1</sup>The pH preservation check of Oil and Grease (Method 1664) and Total Organic Carbon (Method 5310B) are performed as soon as possible after sample receipt and may not be included in this report.  
<sup>2</sup>The pH preservation check of aqueous volatile samples is not performed until after the analysis of the sample to maintain zero headspace and is not included in this report.  
<sup>3</sup>Samples received for pH analysis are not marked as a hold time exceedance here. SW-846 methods suggests analysis to be done within 15 minutes of sample collection. Because of transportation time it is not possible for the laboratory to perform the test in that time. Sample Certificates of Analysis reports are noted as such.  
<sup>4</sup>Samples arriving at the laboratory after 4:00 pm are assigned a due date as if they arrived the following business day unless other arrangements have been made.  
 The due date represents the date the lab report is expected to be completed on or before 5:00 pm (EST) for the date specified.  
<sup>5</sup>All samples which require thermal preservation shall be considered acceptable when received greater than 6 degrees Celsius if they are collected on the same day as received and there is evidence that the chilling process has begun, such as arrival on ice. Control limits are between 0-6 Degrees Celsius. Control limits do not apply for metals analysis.  
<sup>6</sup>Samples requesting analysis for Orthophosphate (SM 4500-P E-99,-11) require the samples to be filtered in the field within 15 minutes of the sampling event. Samples that are received unfiltered will be noted as not method compliant on the Certificates of Analysis.

| 12672-29-6 | Aroclor 1248  | 0.0250                | U    |
| 11097-69-1 | Aroclor 1254  | 0.0250                | U    |
| 11096-82-5 | Aroclor 1260  | 0.0250                | U    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

**Sample Calculation**

First Order (1/X) Weighted Linear Regression with intercept Initial Calibration

$$sc = (Y - A) / B$$

Y = Response uV-sec (sum of 5 quant peaks)  
 A = Constant (intercept) uV-sec  
 B = First Order Coefficient (slope)  
 sc = Solution Concentration (ng/mL)

**Solution Concentration (sc)**

Aroclor 1221       $sc = \frac{6111.475132 - -16.185578}{251.658479} = 24.3491 \text{ ng/mL}$

$$fc = \frac{(sc)(vt)(df)}{(wv)}$$

vt = Extract Volume (mL)  
 df = Analytical Dilution Factor  
 wv = dry weight or volume of sample used  
 sc = Solution Concentration (ng/mL)  
 fc = Final Concentration

**Final Concentration (fc)**

Aroclor 1221       $fc = \frac{24.3491 \text{ ng/mL} * 5.0 \text{ mL} * 1}{1000 \text{ mL}} = 0.122 \text{ ug/L}$

|   | Analyte      | Correlation Coefficient | Equation                    | Value A    | Value B    |

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

| 11096-82-5 | Aroclor 1260  | 0.0250                | U |

Laboratory Qualifiers:

U - Denotes analyte not detected at concentration greater than or equal to the Practical Quantitation Limit (PQL). PQLs are adjusted for sample weight/volume and dilution factors.

This is not a NYSDOH ELAP certified method.

<sup>1</sup>Qualifier column where "R" denotes value outside the control limits or "D" denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

J - Denotes an estimated concentration. The concentration result is greater than or equal to the Method Detection Limit (MDL) but less than the PQL.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

<sup>1</sup>Qualifier column where \*R\* denotes value outside the control limits or \*D\* denotes value was diluted.

ND: Denotes analyte not detected at a concentration greater than the PQL.

PQL (Practical Quantitation Limit). Denotes lowest analyte concentration reportable for the sample.

This is not a NYSDOH ELAP certified method.

AD-Aroclor 1242 is being reported as the best Aroclor match. The sample exhibits an altered PCB pattern.

PB-Aroclor 1221 is being used to report an altered PCB pattern exhibited by the sample. Actual Aroclor 1221 is not present in the sample, but is reported to more accurately quantify PCB present in sample that has undergone environmental alteration.

# TOTAL SUSPENDED SOLIDS

**FORM 3**  
**TOTAL SUSPENDED SOLIDS DUPLICATE SAMPLE ANALYSIS SUMMARY**

Laboratory Name: Pace Analytical Services, Inc.

SGD No: 15060189

ELAP ID No: 11078

Duplicate Lab ID No: AS12337D

Date Analyzed: 6/8/2015

Original Lab ID No: AS12337

| TEST PARAMETER         | ORIGINAL SAMPLE<br>RESULT<br>(mg/L) | DUPLICATE SAMPLE<br>RESULT<br>(mg/L) | RELATIVE <sup>1</sup><br>PERCENT<br>DIFFERENCE (RPD) # |
